7. Comments.

The materials and lecture were challenging but very engaging. This was a very fun class. Thank you

The class was very enjoyable and I was able to learn a lot from Professor Abhi. I especially appreciated the format of the class with the lecture notes that were challenging but during class the Professor was able to clarify and help me understand the concepts. I also thought the topics taught in this course were very interesting and I really enjoyed reading and participating in the discussions. Professor Abhi also gave his own mid-semester survey regarding how he was teaching the class and the general format of the class. He was very responsive to the suggestions and treated students respectfully. Overall, this course was one of my favorites and the Professor did an excellent job.

He is very responsive to questions and helps that students ask him. For example, if the students who work in the daytime can't make it to his office hours, he frequently reminds us of his flexibility to work on questions together upon request. He tries to find the best way of learning for students by asking if there is something that he can do to improve the class. That was when I felt he cared a lot about the course and would help me as much as possible. I know that professors are busy. That is why I was more grateful to him.

The course itself was not what I expected since I initially thought we would be learning the theory behind why we account for certain things a certain way. Instead, this really expanded upon all of accounting theory behind what I could have imagined. In the beginning it was hard to see what the point to what we were learning but as the semester progressed it all began to click and we were able to apply the concepts we learned in class to other situations in the real world. The probability and algebra wasn't very enjoyable for me but I do appreciate how the professor would take his time to break it down step by step.

I think the main highlight of this course was the professor. He really exercised true patience with us which I appreciate since I know there was definitely times where getting us to chime in with our thoughts must have been like pulling teeth. I personally never had the time to attend his office hours however I really enjoyed how flexible he was willing to be to try to accommodate us. Overall, Abhishek Ramchandani was excellent professor that not only showed genuine interest in the subject he taught but also a genuine care for his students wellbeing and learning.

Professor Abhi is an extremely knowledgeable professor who cares deeply about his students. It's clear in class everyday that he puts lots of time and effort into his preparation for each class. He teaches well and everyone listens and tries to participate because his teaching is very intellectually stimulating. I had a great time in his class. My advice for professor Abhi would be to not get down if people are not participating, accountants are shy and they participate 20x more than in other classes where people don't even listen. Thank you professor Abhi!

The content was complex and presented in a clear concise format. I don't know if I would have learned as much if presented by someone less patient and thorough.

Professor Abhi was a great professor, considering that he said it was his first time teaching at UH Manoa, I thought that he was really good! Sometimes with new professors it is either too much of a workload or too easy, his course and workload were very reasonable. At the beginning of the semester I thought that the content and quizzes were too difficult, especially with the grading of participation, however as he understood the class and its students better he adjusted mid-semester and made the content more understandable and also other options for participation which was greatly appreciated. His class was very organized, and I knew based off of the syllabus what would be the next topics to cover. He could improve his lecture notes by posting them in a more timely matter. He is very relatable as he understands college students, and also very knowledgeable in theory and accounting.

Professor Abhi was an extraordinary professor! The class challenged me intellectually, but Professor Abhi was great at helping all students learn. He was also available at all times, he was very flexible with the students because he would set up Zoom meetings for us. I think Professor Abhi should keep teaching this class because he is very intellectual and it is a better format than the way the class taught prior.

This was a very challenging course. The Professor was very knowledgeable on the content. However, I think there were too many instances as to where he assumed we knew certain languages and symbols that in reality as students were not familiar with.

Game theory inherently is more about application, so I feel like it'd be better tested rather than a test. I feel like an assignment to create a model or game will push students more than memorization.

This course provided challenging theory concepts, but the way that the material was relayed furthered critical thinking and comprehension skills. The professor helped to facilitate a classroom environment that was both interactive and inspiring.

Overall, this was a good course and the professor did a good job teaching. The professor always wanted to make sure that the students were understanding the content. One suggestion that I have is for there to be a draft submission for the research project so students can get feedback on the research proposal before the final draft is due.
